

OUR PRODUCT
YOUR IDENTITY

QUALIFORM

ABOUT QUALIFORM

Created in 1995 Qualiform is a French-based strong value-added specialist in the prestige and masstige plastic flacons business.

We offer a selection of elegant standard designs, as well as customized packaging solutions for beauty industry. Our know-how and expertise are highly reconized and appreciated by major perfume, make-up and skincare players such as Chanel, Coty, Estée Lauder, L'Oréal, LVMH.

The in-house high-quality decoration options provide excellent opportunities to individualize your product enabling it to stand out from the competition. Our passion for innovation and over 20 years of experience allow us to help your brands perform in the demanding personal care world and create a unique, remarkable packaging solution for you.

QUALITY

CUSTOMIZED DEVELOPMENTS

OUR EXPERTISE IN CUSTOMIZED DEVELOPMENTS

Do you need an exclusive package design outside our standard portfolio?
Our team can create it for you.

For over 20 years, we have been developing customized packaging solutions
for individual customers' requirements.

By implementation of each project we strive to originality, innovation
and differentiation. Our team leads and guides customers through
all steps of specific development and adds value to client's brief by enhancing
products characteristics.

Qualiform is already well-recognized by prestige and masstige brands as reliable
partner for demanding flacons creation. Our customers can be fully confident
with developing new products with us - we ensure highest quality standards
and on time delivery commitments.

GREEN LINE

THINK GREEN | ACT GREEN | LIVE GREEN

Improvement and Constant Development

There are a wide array of new materials being introduced into the market that can have a much lower impact on the environment. As part of our commitment to sustainability and environmental initiatives, here we provide a summary of the issues involved and how we address them. Many of these terms appear on packaging and are not completely understood by consumers.

Bio-based materials

Many of the products offered by Qualiform can use bio-based polymers. The percentage can range from low (less than 10%) all the way to complete (100%). Bio-based materials include plastics made from renewable resources such as corn, sugar cane, cellulose, and others. These materials are typically less environmentally impacting.

Biodegradable

A substance is considered to be biodegradable when microorganisms can break it down and metabolize it. This happens naturally with organic compounds. Petroleum-based plastic is different, though, it can not be broken easily. There are basically two kinds of biodegradable plastic: Plastics originating from bio-based materials (see above) which are naturally biodegradable, or Petroleum-based plastics that have include non-impacting additives that can allow biodegradation to take place.

Compostable

This term is what many consumers think “biodegradable” means, but it is actually a step further. For something to be “compostable”, it must break down into carbon dioxide, water and biomass in a reasonable amount of time to create compost, otherwise known as humus. Many biodegradable plastics may eventually break down after a longer period of time or leave some slight residue. Hence, they are not completely compostable. Understanding the difference is key in determining how the bio-plastic should be treated once it has been used by the consumer. “Compostable” implicitly means “biodegradable” but not vice versa.

Recyclable

Plastic that is neither biodegradable nor compostable can generally be recycled. It tends to go through a cycle of collection, separation, shredding, washing, and re-use. The resulting material is known by the broad term PCR (Post-Consumer Recycled) and is used in many things we use every day, though never in the same sort of product from whence the plastic originated.
